

I oppose the rule changes to Part 15 relating to Broadband over Power Line devices. The radio spectrum is a national resource, and should be protected from pollution which BPL will cause. The present limits on HF signals permitted under Part 15 which are generally transmitted for only short periods are much too high for BPL which will be transmitted from the power lines for 24 hours a day, 365 days a year. This will completely impair all normal HF communications including emergency communications, and other vital radio communications.
